

Inverser une matrice

Voici un exemple :

```
> with(linalg):
```

```
> P:=matrix(4,4,[1,0,1,1,1,1,0,1,-1,1,1,0,0,2,0,1]);
```

$$P := \begin{bmatrix} 1 & 0 & 1 & 1 \\ 1 & 1 & 0 & 1 \\ -1 & 1 & 1 & 0 \\ 0 & 2 & 0 & 1 \end{bmatrix}$$

```
> Q:=inverse(P);
```

$$Q := \begin{bmatrix} -1 & 3 & 1 & -2 \\ -1 & 2 & 1 & -1 \\ 0 & 1 & 1 & -1 \\ 2 & -4 & -2 & 3 \end{bmatrix}$$
